

Corporate IT Organizations turn to Challenge Training and Consulting for Technology Training & Consulting Services

Industry Background

Budget conscience corporate IT organizations face ever changing and increasingly complex challenges. Since our inception in 1994, **Challenge Training and Consulting (CTC)** has maintained a strong business alliance with large corporate IT organizations throughout the United States. Our expertise and commitment to quality has positioned us to serve the unique requirements and budgetary constraints of corporate IT organizations.

Industry Specific Services

CTC has successfully worked with technical managers to provide world class training for the applications they are deploying departmentally, nationally or globally. IT Managers realize that without the proper training the ROI and productivity related to new application deployments or system upgrades are significantly diminished. CTC has become an integral part of the application deployment process for many well recognized corporations through it's tenure. End user populations have consistently given our Learning Professionals high marks over the years and keep coming back for additional training as software is upgraded.

Additionally, CTC has provided consulting and staffing services to aid in the implementation of network/software installations and upgrades. We have provided our clients with IT resources that out-perform our client's expectations and Service Level Agreements (SLAs) year-after-year.
